CLAY BRICKSLIPS

Licata clay slips are a versatile thin brick cladding that simulates the look of traditional clay brickwork whilst providing greater insulation and more flexibility of style and application.

Key Features

- **A2 fire classification**
- **Traditional aesthetic**
- **Quick to install**
- **High impact resistance**
- **For Internal & External Use**

PRODUCTS

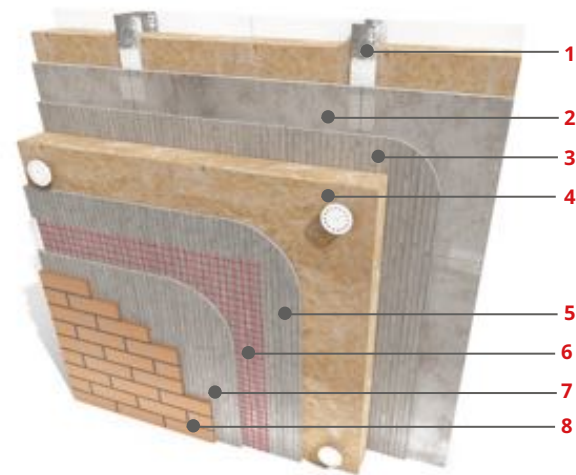

Our clay slips come in a range of sizes, colours and textures, and are suitable for both internal and external use. Providing modern insulation and greater adaptability whilst giving you that traditional brickwork look that is so popular in the UK.

Suitable for both low and high rise buildings, this is an A2 fire classification brick slip system in accordance with BS EN 13501-1 : 2007.

LICATA CLAY BRICK SLIP SYSTEM ON STEEL FRAME

Clay Brick slips can be used in conjunction with a Licata Therm External Wall Insulation System on steel framed systems.

- Full system beads
- Insulation boards
- Fixings
- Reinforcing coat
- Acrylic Brick slips and pointing mortar

Features

Suitable For Steel Frames
Over 700 Colour Options
Weather Resistant
Protects Against Algae & Mould
Excellent Drying Time
Breathable & Lightweight
Durable & Water Repellent
Great Adhesion & Spreadability

SCAN ME TO VIEW THE FULL SYSTEM ONLINE.

1. Steel Frame
2. Licata A1 Rated Fibre Cement Board
3. Adhesive system. Acril Primer plus, to substrate to ensure correct adhesion
4. Insulation Boards achieve insulation values to meet or exceed, stringent requirements of Part 'L' of the building regulations.
5. Reinforcing Coat Raso Plus - a dry adhesive hydraulic and polymer binder, modifying additives and fine grain fillers, vapour permeable. Range of working temperatures from +5 to +30 C. Mixed with around 6.5 litres of clean water per 25kg bag.
6. Reinforcements shall be our fibreglass mesh with a surface treatment coating to provide a high resistance to alkali attack and is manufactured so as to prevent laminar movement and deformation.
7. Licata Clay Brick slips adhesive (Super S1)
8. Clay Brick Slips to create the appearance of a classic brick finish.

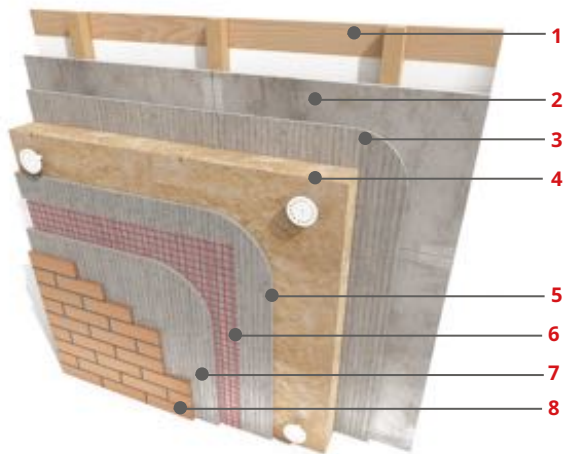

LICATA CLAY BRICK SLIP SYSTEM ON SUBSTRATE TIMBER

Clay Brick slips can be used in conjunction with a Licata Therm External Wall Insulation System on panel substrate-timber framed systems.

- Full system beads
- Insulation boards
- Fixings
- Reinforcing coat
- Acrylic Brick slips and pointing mortar

Features

Suitable For Various Substrates
Over 700 Colour Options
Weather Resistant
Energy Carbon Saving
Breathable
Protects against algae & mould
Fully Fire Compliant
Suitable For New Builds & Refurbishment

1. Blockwork/ Brickwork or steel framed systems
2. Adhesive system. Acril Primer Plus, to substrate to ensure correct adhesion
3. Insulation Boards achieve insulation values to meet or exceed, stringent requirements of Part 'L' of the building regulations.
4. Fire Barriers to comply with the recommendations of the BRE, horizontal barriers are required to be placed at every floor level above 2 storeys. These barriers comprise of 1200mm x 200mm rock fibre panels, density 140kg/m³. The strip is adhered to the substrate in a continuous strip around the building.
5. Reinforcing Coat Raso Plus - a dry adhesive hydraulic and polymer binder, modifying additives and fine grain fillers, vapour permeable. Range of working temperatures from +5 to +30 C. Mixed with around 6.5 litres of clean water per 25kg bag.
6. Reinforcements shall be our fibreglass mesh with a surface treatment coating to provide a high resistance to alkali attack and is manufactured so as to prevent laminar movement and deformation.
7. Licata Clay Brick slips adhesive (Super S1)
8. Clay Brick Slips to create the appearance of a classic brick finish.

APPLICATION

Take a look at our 5 part step by step for applying our brick slips.

1

With the help of a notched trowel (4 mm) spread special Basecoat adhesive on a substrate of approximately 1m². Do not spread on wider area due to fast drying rate of the adhesive. Thickness of the layer should be around 2 mm. It is recommended to start where the first tile is to be installed and working across horizontally to complete at least one full row of brick slips.

2

Lay from several boxes of brick slips at the same time to ensure a nice even colour variation, and to avoid any “banding” issues. Start from one end of your wall, push the first brick slip firmly onto the adhesive applying even pressure across the whole face of the brick slip. After the first slip is installed leave 12-14 mm space between the brick slips. You must carefully press over its entire surface to the adhesive immediately after the application. Laying in horizontal runs until you have completed the wall.

3

Depending on you project and the dimensions of your wall you may need to cut brick slips to ensure a perfect finish. Carefully mark out the brick slips to be cut, it is best practice to mark out all the slips and cut them all together by using a tile cutter, angle grinder etc. Remove all dust and debris from the back face of the brick with a wire brush.

4

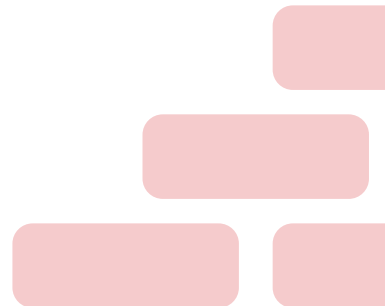

Corners are installed in the same process as the brick slips.

5

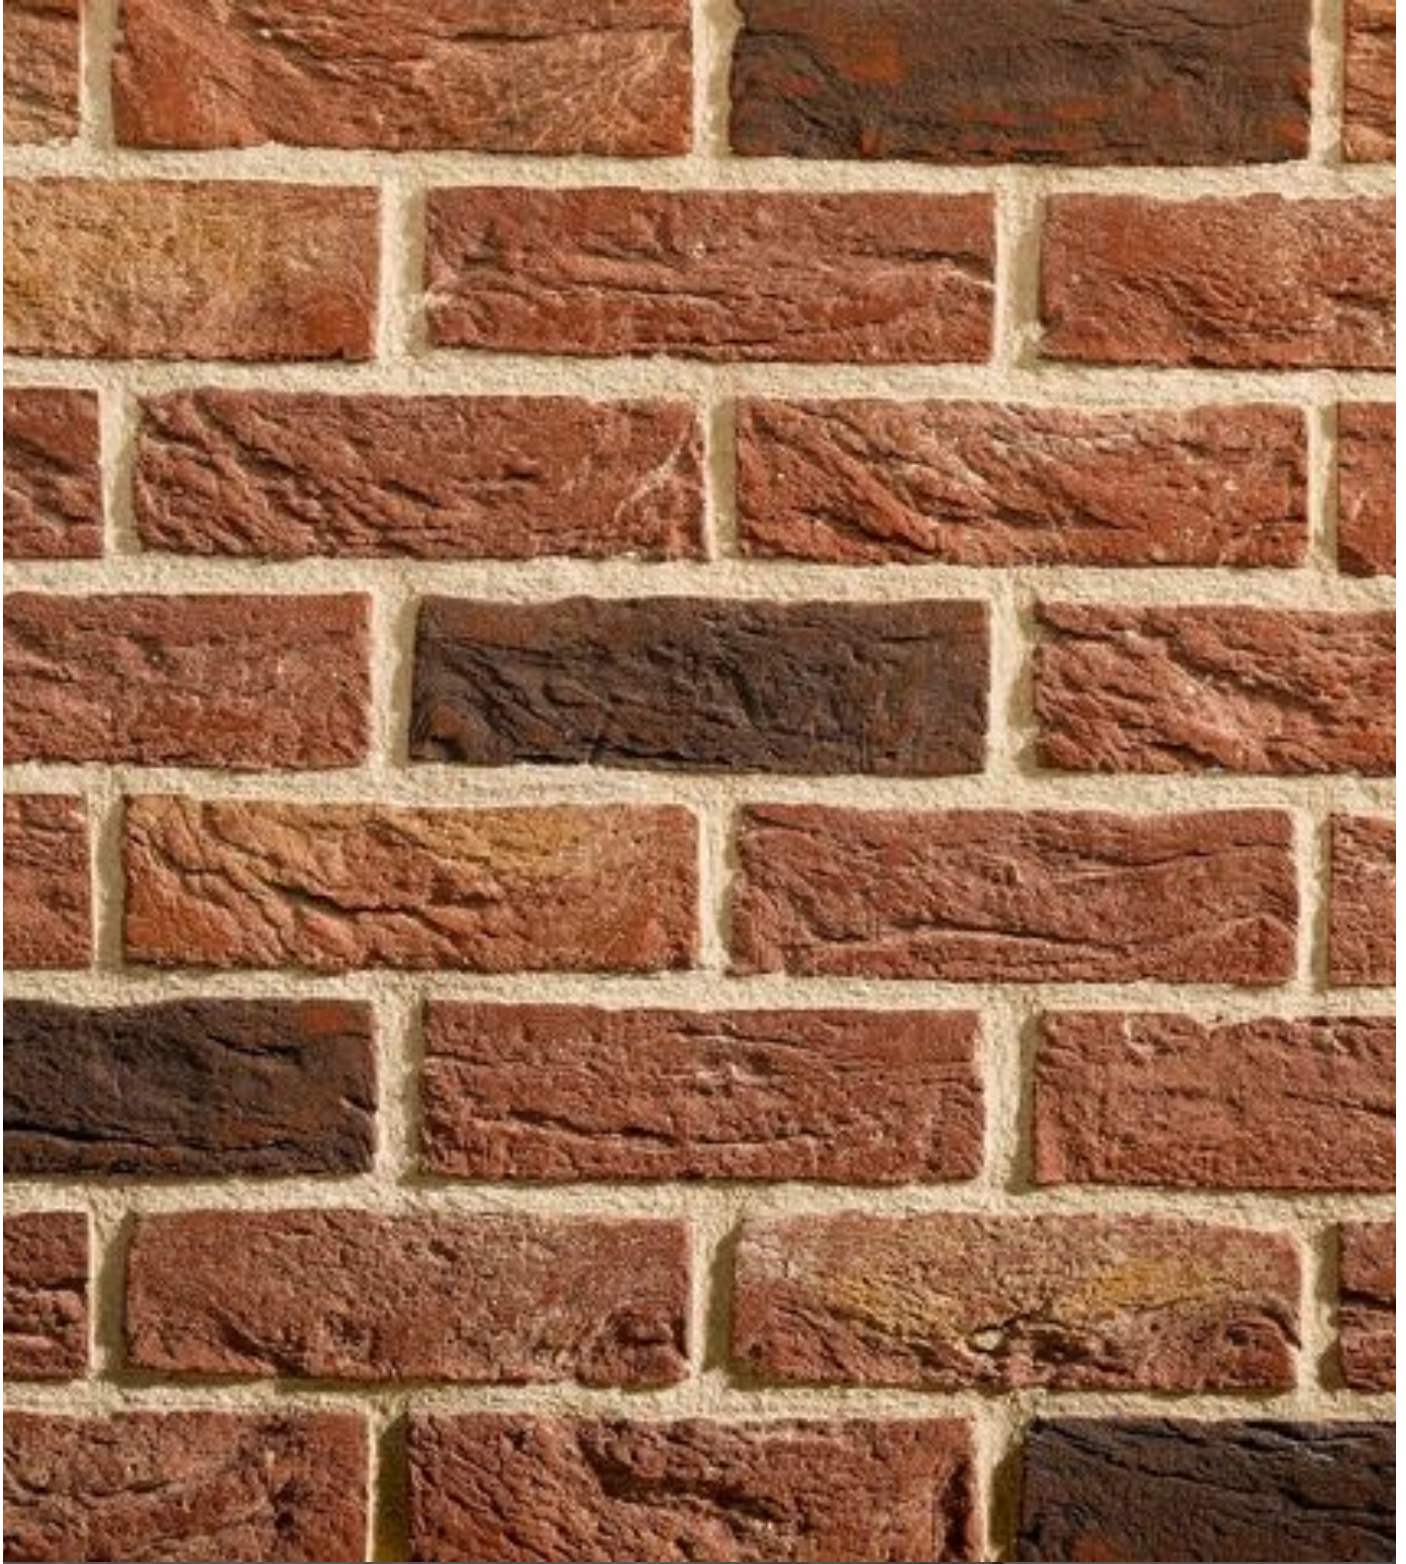

After pressing the brick slips the fresh excess adhesive must be removed by using a brush (12 mm wide) .It is very important to pay attention to the execution of sealing the joints to block the access of the water between the brick slips and the adhesive. It is very important to cover the edges of the brick slips must be fully coated with the adhesive.
